Cognito Forms

Bryan Matthews

Software Developer

929 Gervais St suite d, Columbia, SC 29201

Dear Mr. Matthews,

Computers have always interested me since I was a little kid. A memory that comes to mind, is when I was younger my mom brought home an old laptop that wouldn't turn on, and I would spend hours on end trying to repair it. I knew nothing about computers but the thought of all the things I could do if I got the laptop to work drove me on. Eventually I came to appreciate the software side of computers once I realized this was where all the innovation could be done.

Throughout high school and through taking dual enrollment classes, I learned how to use a lot of the basic software on computers such as Microsoft Word and Excel. Once I arrived at the University of South Carolina I acquired another level of familiarity with programming. I learned how to use java, html, and I have some familiarity with C++. I am projected to graduate in the Fall of 2021 and I have nothing but confidence in the development of my programming abilities. I plan on joining some of the schools computing clubs to help develop my skills and give me more experience.

I know that Cognito Forms is a business that assists companies in developing their own software. I always wanted to be a part of a team that had innovating as one of its driven points. With my knowledge of computer programming and my strong willingness to assist others I feel like I would be a great fit for Cognito Forms. I look forward to hearing the next steps in the application process.

Sincerely,

Titus Melton
